

Violet Whiting

SENIOR / STAFF SOFTWARE ENGINEER | BACKEND PLATFORMS, DEVELOPER TOOLS, AND FULL-STACK SYSTEMS

(386) 624-4689 | thebotsupra@gmail.com | San Diego, CA

PROFESSIONAL SUMMARY

Senior software engineer with 15+ years of experience designing backend platforms, developer tools, full-stack applications, and mobile systems. Former Qualcomm Senior Staff Engineer with expertise in Python, TypeScript, gRPC, Django, cloud deployment, CI/CD, and version-control integrations. Experienced leading system modernization, API architecture, legacy migrations, and cross-functional delivery across enterprise, healthcare, and SaaS environments.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C++, Java, Swift, Objective-C, PHP, HTML, CSS

Backend: Django, Flask, SQLAlchemy, Laravel, Zend Framework, CodeIgniter, gRPC, HTTP, REST APIs, Celery

Frontend and Mobile: React, iOS, Android

Data: PostgreSQL, MySQL, Elasticsearch

Cloud and Delivery: AWS, containerization, CI/CD, Linux, Airflow, Azure APIs

Developer Tools: Git, GitHub Enterprise, SVN, Mercurial, Perforce

PROFESSIONAL EXPERIENCE

Independent Software Engineer

Self-Employed | San Diego, CA | Sep 2023 - Present

- Architect and maintain a framework-independent TypeScript UI toolkit built on direct DOM updates, with stateful component lifecycles, typed models, event handling, observable storage, routing, serialization, and theme abstraction.
- Built a real-time, cross-platform motorsports telemetry dashboard with configurable panels, live standings, track visualization, steering and input telemetry, WebSocket and gRPC-Web streaming, and Vite, Tailwind CSS, and Tauri integration.
- Drawing on direct Uber driving experience, developed PayAnalysis, an iOS gig-offer intelligence application using ReplayKit and Vision OCR to capture offer cards, calculate mileage, hourly earnings, vehicle cost, and estimated profit, and submit normalized data to a Python and gRPC service.

Qualcomm Inc.

Senior Staff Engineer, Content Compliance | San Diego, CA | Sep 2019 - May 2023

- Developed and maintained full-stack services and shared libraries supporting a React application and Airflow-based automation for compliance testing.
- Architected and led development of a Python and gRPC API service for automated code-scanning tools across Git, SVN, and Mercurial repositories, supported by reusable Python client libraries.
- Designed API integrations for entitlements and authentication using Azure APIs.
- Partnered with DevOps engineers to containerize services and implement CI/CD pipelines for scalable cloud deployment.
- Developed backend workflows with Django, Flask, PostgreSQL, Celery, and Elasticsearch to support API services, search, and reliable data processing.

Property Capsule Inc.

Senior Engineer | San Diego, CA | Feb 2018 - Sep 2019

- Engineered the migration of a monolithic legacy application to an automated, AWS-deployable service with improved maintainability and scalability.
- Established automated testing, development tooling, and modern deployment workflows to strengthen code quality, application performance, and release reliability.
- Restructured the codebase to support multi-client functionality and broader cross-functional use.

Applied Informatics Inc.

Mobile and Web Technology Lead | Remote / New York, NY | May 2014 - Jun 2017

- Directed development of a web-based platform supporting clinical research study design and deployment.
- Designed and built a system that automated the transition from web-based study designs to native iOS and Android applications.
- Led cross-functional product delivery and collaborated with academic researchers to develop the Phendo study software around clinical workflow requirements.

X Studios Inc.

Lead Developer | Orlando, FL | Sep 2008 - Aug 2013

- Led a small engineering team delivering web, mobile, and server applications, including full-stack systems and REST APIs.
- Owned project estimates, system architecture, technical documentation, client communication, and Agile delivery coordination.
- Administered Linux deployment environments, package builds, server configuration, and production release workflows.
